9 May 1979

MEMORANDUM FOR THE RECORD:

SUBJECT: Request from Mr. [REDACTED] SECOM

25X1A

1. I received a call this date from Mr. [REDACTED] DCI SECOM, requesting information concerning methods employed within industry for the storage of collateral classified materials up through TOP SECRET. [REDACTED] it is noted, is the SECOM security referent concerned with development of security procedures for safeguarding records generated under and authorized by the Foreign Intelligence Surveillance Act of 1978. (U)

2. I indicated to [REDACTED] (once again) that such request should properly come to the Office of Security through the Policy and Plans Group. [REDACTED] stated that there was not time to submit a formal request through channels as his need was urgent. (The reader should note that a meeting was held last week between [REDACTED] OGC, [REDACTED] and I on this same matter. It was suggested then that the 1973 USIB standards for the storage and protection of SCI would be appropriate to this situation since, according to [REDACTED] the information and material would be compartmented. It was at that time, too, that [REDACTED] was told, at the direction of C/ISB, that further requests for Office of Security information and guidance should be directed to the Policy and Plans Group. He agreed.) (C)

3. The DC/ISB and I discussed [REDACTED] current request with the DC/PhySD who suggested that [REDACTED] be given a copy of physical security storage and construction standards contained in the recently approved "Standard Security Procedures for Contractors" for his information and use as he sees fit but with clear understanding that ISB is not endorsing the use of those standards for application by common carriers under the Foreign Intelligence Act of 1978. 4. I recontacted [REDACTED] and passed along the caveat imposed by the DC/ISS, which [REDACTED] said he understood, and suggested he obtain a copy of the requested standards from Mr. [REDACTED] SECOM, who sits in proximity to [REDACTED] (A copy of those standards was requested several weeks ago by [REDACTED] in connection with his assignment to develop revised storage standards for compartmented and collateral classified information and materials.)
